PROJECT

TripManaPro | Multi-Service Travel Booking E-commerce Platform

GitHub: <https://github.com/ngoctien1712/Trip-mana-pro>

Role: Backend Developer

Technologies: Node.js, TypeScript, PostgreSQL, Redis, BullMQ

Key Contributions:

- Engineered backend architecture using specific Controller - Service - Worker pattern to handle complex booking logic for Tours, Hotels, and Buses concurrently.
- Implemented Background Processing with Redis & BullMQ to handle async tasks like Email OTP and automatic inventory release timeouts.
- Built a contextual Real-time Chat module using Firebase Firestore connecting Customers and Owners.

Results:

- Decreased API response time significantly under 200ms by offloading heavy tasks to background queues.
- Ensured 100% data integrity by automatically releasing locked inventory from unpaid orders, completely eliminating overbooking risks.
- Maintained high code maintainability and scalability through strict TypeScript typing and modular architecture.

Canvas LMS Personalized Learning Recommender (LTI 1.3 Integration)

GitHub: <https://github.com/phucthanh1705/CanvasLMS-Personalized-Recommender>

Role: Backend & System Integration Engineer

Technologies: Python, Flask, LTI 1.3, Canvas LMS API, Neo4j, PostgreSQL

Key Contributions:

- Built backend services to synchronize courses, modules, and student data from Canvas LMS using REST APIs
- Implemented LTI 1.3 authentication to securely embed the application inside Canvas
- Developed rule-based personalized recommendation logic to suggest learning modules based on student progress
- Leveraged AI tools (ChatGPT, Lovable) to support initial backend scaffolding and UI prototyping, accelerating development while retaining full ownership of system design and business logic

Results:

- Successfully deployed and tested in a real Canvas LMS environment
- Enabled students to identify learning modules aligned with their competency levels

SUMMARY

- Software Engineering Intern with a solid foundation in software development and backend systems.
- Hands-on experience building RESTful APIs, background processing systems, implementing secure authentication flows (JWT, OAuth2, OIDC).
- Comfortable working with JavaScript/Node.js, databases and Agile/Scrum environments.
- Actively seeking a Software Engineer Internship to gain real-world experience and contribute to production-ready systems.

SKILLS

Programming: JavaScript, Java, Python

Frameworks: Node.js, Spring Boot, Flask

Databases: PostgreSQL, MySQL, SQL Server, MongoDB

Backend Architecture: RESTful APIs, Background Jobs, Queue Processing (BullMQ), Authentication (OIDC, JWT, OAuth2)

AI Tools & Developer Productivity: ChatGPT, Antigravity, Cursor, Lovable

Tools & Platforms: Git, Postman, Linux, Docker, AWS (EC2, S3)

Methodologies: Agile / Scrum, UML

Languages: English

EDUCATION

HUTECH University - Ho Chi Minh City
Bachelor of Information Technology – Software Engineering
Sep 2022 - present | GPA: 3.55 / 4.0

ACTIVITIES

IT Got Talent Competition – Semi Finalist

Role: System Design & Backend Developer
